

### Mi.Net Mobile Collector

#### Features

**APPLICATIONS:** The Mueller Systems **Mi.Net** Mobile Collector is a high performance, vehicle based AMR/AMI collector. It is designed to collect water meter data via radio frequency while driving a meter route at posted speed limits in AMR mode. When used in conjunction with the **Mi.Net** AMI system, the Mobile collector can be used as a disaster recovery device to obtain meter data from stranded assets. The complete **Mi.Net** Mobile hardware package includes the mobile radio collector, magnetic antenna, and all cable connections. Implementation of a mobile meter reading solution like **Mi.Net** Mobile ensures significant performance improvements in reading efficiency, data collection, customer satisfaction and cash flow for utilities.

**OPERATION:** The **Mi.Net** Mobile Collector can be temporarily or permanently mounted in any vehicle. Once initialized, it operates quietly in the background and transfers data to a computer of the customer's choice. The **Mi.Net** Mobile Collector receives data on multiple discreet frequencies for secure and reliable data processing. During the reading process, the technician can view a number of route progress screens which include route mapping with representations of all meter locations, tabular screens depicting all meters, meters remaining to be read, collected meter readings and route performance overview. At the end of the collection period, the data is uploaded via the EZ Reader™ route management software into the utility's billing software with just a few clicks of a mouse. A standard series of reports are available for viewing performance of the system, the status of all event and duration codes, battery health, and past high leaks and backflow events.

**PERFORMANCE:** The **Mi.Net** Mobile Collector receives power via the vehicle auxiliary power outlet and a USB connection provides data interchange with the laptop. A sensitive magnetic antenna mounted on the vehicle's roof provides the basis for all radio frequency (RF) communication with Mueller Systems radios. Meter information is received and processed as it is transmitted to ensure continuous high performance data capture on multiple receiver channels of the **Mi.Net** Mobile Collector. The meter reader collects all RF data by simply driving past the meters equipped with Mueller Systems Hot Rod transmitters or Mi.Node M units. The system will provide the option of two way communication for the actuation of residential disconnect meters (RDMs) and retrieval of data logging information from meters in Q2, of 2018.

**CONFORMANCE TO STANDARDS:** The system is FCC Certified for operation in the United States. It is fully compliant with FCC Part 15 and no FCC license is required for operation.

**CONSTRUCTION:** The **Mi.Net** Mobile Collector is small, lightweight and encased in rugged thermoplastic with rubber protective corners for protection. All internal electronics are shielded against electromagnetic interference. Connection to the laptop, antenna, and power are accomplished on the back of the unit. All connections are clearly marked for operational efficiency and ease of installation. LED lights on the front of the unit confirm power, RF reception, and temperature status.

Mi.Net Collector

Mi.Net Mobile Collector

#### Materials and Specifications

<b>RADIO FREQUENCY</b>	Operates on 902 to 928MHz (No FCC license required)
<b>PC OPERATING SYSTEM</b>	Windows operating system
<b>OPERATING SOFTWARE</b>	EZ Reader Route Management Suite
<b>RECEIVER POWER SUPPLY</b>	Powered via vehicle power outlet; 12VDC
<b>RECEIVER DIMENSIONS</b>	L: 9.5" W: 8.4" H: 3.5"
<b>RECEIVER WEIGHT</b>	6 lbs (approximately)
<b>ANTENNA HEIGHT</b>	16" Magnetic Mount
<b>TWO WAY COMMUNICATION</b>	FCC LICENSE EXEMPT (2 way functionality anticipated Quarter 2, 2018)
<b>OPTIONS</b>	VESA Vehicle Mounting Bracket
<b>OPERATING TEMPERATURE</b>	-40°F to + 122°F (-20°C to + 50°C)
<b>STORAGE TEMPERATURE</b>	-40°F to + 176°F (-20°C TO + 80°C)
