

EZ READER™ SOFTWARE SUITE

Route Management Software

FEATURES

Applications: A total route management software system solution for mobile meter reading, the EZ Reader™ system combines state of the art software with a variety of powerful, lightweight and rugged handheld computers. The software is compatible with the Mueller Systems vehicle based Mobile Transceiver for full two way communication.

EZ Reader Software is the superior alternative mobile utility meter reading. Using the latest technology in software development and the most effective price / performance hardware alternative, EZ Reader Software surpasses the competition with superior functionality, unparalleled flexibility, and exceptional performance making it one of the most comprehensive and easy to use tools on the market.

The EZ Reader System is a complete meter reading application capable of interfacing with any host billing system, including custom developed systems. Its efficiency eliminates unnecessary file duplication, maintenance requirements and opportunities for errors common to many other reading systems. A powerful and capable tool for utilities of all sizes for mobile applications.

Operation: The EZ Reader Software uses standard ASCII file format data from the host billing software computer. This host download file contains route information about customers, meters and previous meter readings. The interface file then downloads the route data to the EZ Reader Software on the PC. This data is prepared for mobile radio meter reading, in just three mouse clicks. The meter reader then reads the predetermined route and returns with the data which is uploaded to the EZ Reader Software for processing. Reports and statistics can be run, after which the reading data is ready to be uploaded back to the host billing computer.

Conformance to Standards: EZ Reader Software meets the Open Systems Foundation Goals and operates on any compatible PC with Microsoft® Windows 10.

MATERIALS AND SPECIFICATIONS

Radio-Read ready interface for the Mueller Migratable System.

Visual-Read ready for keyboard entry of meter readings.

Accesses data by route, customer name, service location or meter number with either sequential or random access.

Mapping view permits visual verification of route and readings.

Unread feature can screen out completed readings and scan only the unread accounts.

Notes feature accepts alpha numeric text allowing comments and instructions to be transferred between meter readers and billing administration.

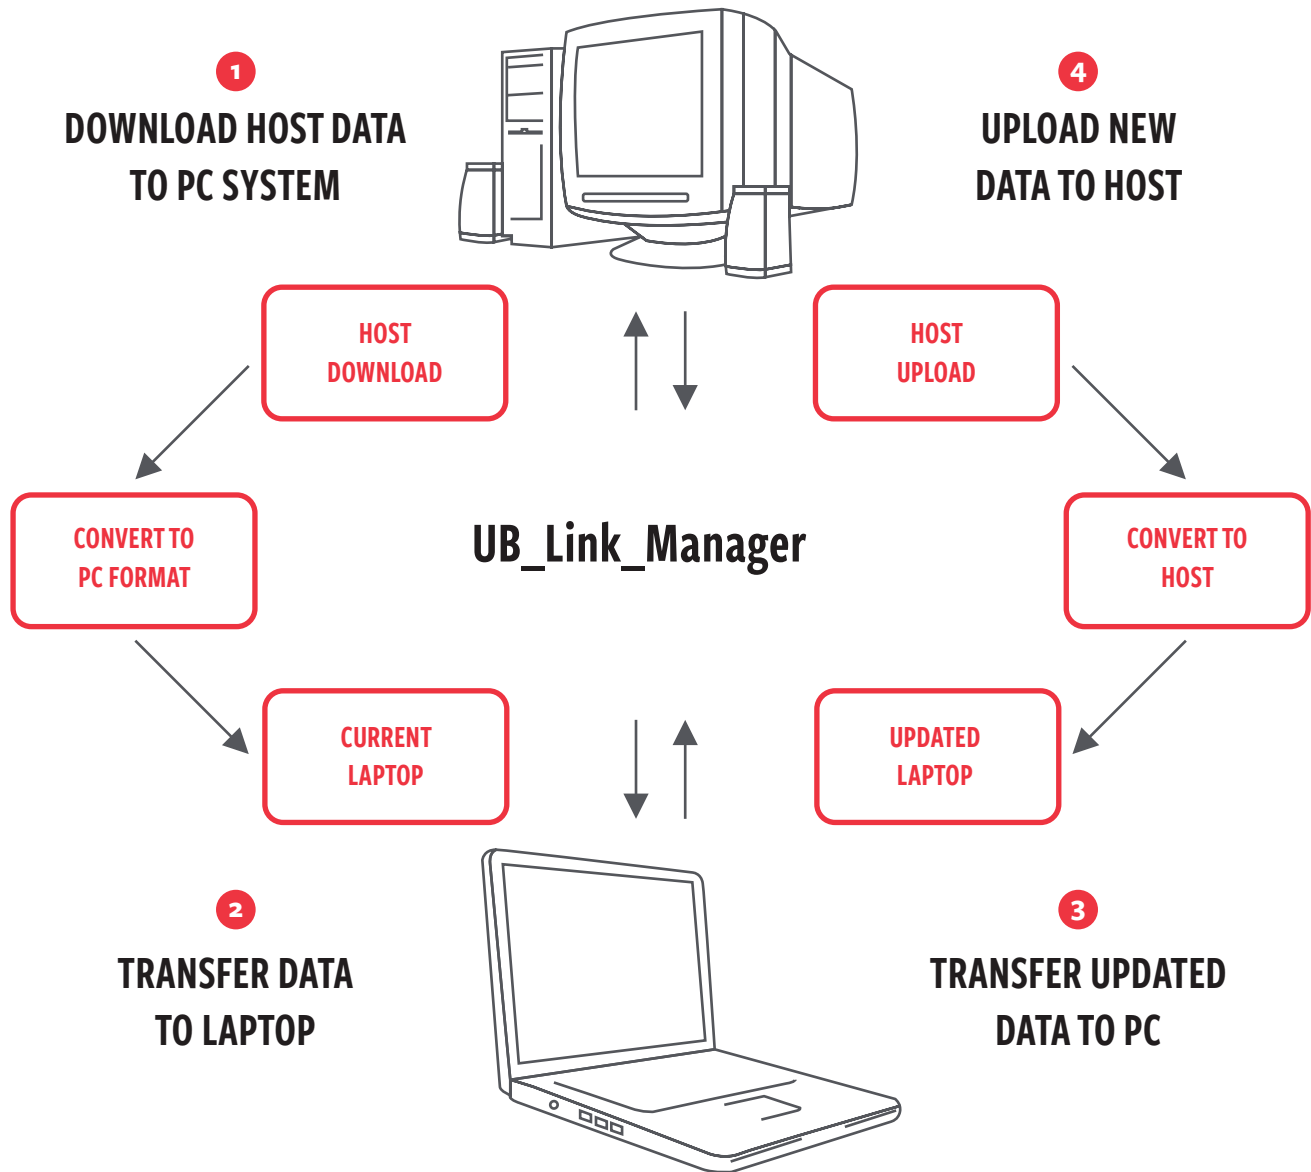

On-line, context sensitive help.

Annual maintenance program includes maintenance and software updates.

Reports and statistics are open to other Microsoft tools such as Excel or Access programs.

SYSTEMS OVERVIEW

UTILITY BILLING SYSTEM

Information on routes, meters, customers etc. is downloaded from the current Utility Billing System and converted to a format compatible with the computer database using EZ Reader. The current files are then loaded onto the appropriate reading devices. This creates the current computer database. The current computer database is then updated with new information through routine meter reading operations using EZ Reader mobile computer systems. The updated database is then loaded back to EZ Reader. The updated database is then converted back to the proper format for uploading to the Utility Billing System.
